DATABASE

So, what do educational institutions
think of EnterMedia DB?

"The willingness of EnterMedia to consider, and invest in, creative solutions for our specific project needs was a significant factor in our decision to choose them as our DAM vendor. We discovered that we needed to customize the existing search functions by creating advanced filter features, and our requests were well received and promptly addressed."

**Harvard University
Center for the Environment**

*– Eric Simms, Educational Programs Manager,
Center for the Environment, Harvard University.*

"EnterMedia provides a robust, flexible, and easy-to-use system for organizing and managing digital assets of any kind, while also allowing for easy location and retrieval of assets. Integration with other systems and public websites is also easily possible with EnterMedia."

Mindset Teach

teach

– Johan Els, COO and CTO of Mindset

"We did a very comprehensive comparison of the products in the market – commercial and open source ones. EnterMedia won us because of its user interface, cost, support, and customization."
"When working with their support and development team, we see they are willing to help, competent, professional, and open-minded. We're their happy customer! We've used it for 3 years now."

**South Dakota
State University**

SDSU

*– Dr. Shouhong Zhang, Manager Instructional Design
Services, South Dakota State University*

Personalization.

Just for your creative team.

At EnterMedia DB, we live to serve and create unique user experiences with our software or should we say *your software-*

EnterMedia is a next generation, open source, media database platform. It is tailored towards web developers and media teams. Full JSON API is available, and source code is available under a perpetual and transferable, LGPL license.

Choose right down to the color theme of your EnterMedia Database Software.
